

CRUDE OIL & DISTILLATE

Our ethanol extracted CBD /THC crude oil and distillate are mainly used for our own value added products, but we may sell in bulk volumes to those who have a valid licence. Please enquire for pricing on our oils that is dependent on quantities, availability and importing country requirements.

CBD SMOKING FLOWERS

These hemp flowers are grown naturally outdoors under the Malawian sun and slowly dried for freshness. Our flowers are rich in cannabidiol (CBD) that is non-psychoactive.

All of Invegrow's food and wellness products are made in licensed GACP/GMP certified facilities using flower and grain produced from locally cultivated plants.

invegrow

WHAT WE DO

For almost a decade, Invegrow has worked with the Malawi Government to research cannabis under Malawian conditions and with courage and perseverance we became the first licensed grower and processor of CBD and THC cannabis in Malawi. Now, with our sister company, Genscore Africa, we can offer seeds, seedlings and consultation services to help ensure Malawi becomes a global player in the cannabis market.

Nature is our passion

Whether your needs are genetics, premium flower or biomass, grain for food, stalk and hurd, or broad spectrum cannabis oil, Invegrow has the products and services for you.

CONSULTATIONS, SERVICES & TRAINING

We provide guidance in plant husbandry, intercropping, soil management and crop planning and can offer technical activity training and designing for companies, cooperatives and individual farmers for both cannabis or general farming activities. For producers, processors and retailers in horticultural and agricultural industries, we have a diverse catalogue of high quality and low cost equipment for farming, collection, storage and processing requirements.
